

Question Bank 24UCSES102

1. Write a c++ program to check if a user given number is divisible by 7 or not.
2. Write a c++ program to find the maximum of two numbers.
3. Write a c++ program to find the factorial of a user-given number.
4. Write a c++ program to which implements the below map and print it :
{ {Name, Your_name}, {PRN, Your_PRN}, {Age, your_age} }
5. Write a c++ program to check if a user-given number is an odd number or not.
6. Write a function in c++ that returns true if a given string consists of any English vowels else it returns false.
7. Write a c++ program to print only the even numbers from 1 to 100, i.e. [1,100], 1 and 100 both included.
8. Print the below given pattern:
*
* *
* * *
* * * *
9. Print the below given pattern:
*
* *
* * *
* * * *
10. Write a function in c++ that takes input of the diameter of a circle and returns the area of the circle.
11. Write a function in c++ that takes input of a natural number N and prints all the natural numbers starting from 1 till N using a for loop.
12. Given an array:
{1, 2, 3, 4, 5, 6, 7, 8, 9, 10}

Write a c++ program that performs Linear search for any given user-input number.

13. Write a c++ program to create an array of size 10 and assign numbers from 1 to 10 and print the values of the array using a for loop.
14. Create a class Dog, which has attributes namely color and legs. The class should have a constructor defined, also define two functions namely sound() which when called should print "bark" and display(), which when called should print the attributes color and legs.
15. Create a class Car, which has attributes namely color and brand. The class should have a constructor defined, also define two functions namely sound() which when called should print "broom" and display(), which when called should print the attributes color and brand.
